Education

Drexel University

Expected Graduation: June 2030

Bachelor of Science in Software Engineering, Minor in AI & Machine Learning

Philadelphia, PA

- **Relevant Coursework:** Software Engineering & Development, Advanced Programming Tools & Techniques, Requirements Engineering, Computer Programming I-II, Computing and Informatics Design I-III, Calculus I-II

Technical Skills

Languages: Python, Go, C, Java, JavaScript, SQL, HTML, CSS

Developer Tools: Git, GitHub Actions, Linux, Docker, CI/CD

Libraries/Frameworks: Flask, FastAPI, SQLAlchemy, SQLite, PostgreSQL, pytest, OpenAI API, Pydantic, Jinja Templates

Experience

Lead Frontend Engineer

August 2026 – Present

A Better Way PAC

Philadelphia, PA

- Led the migration of 4 pages from Squarespace to a custom HTML/CSS, JS frontend and a RESTful FastAPI backend, reducing page-load time by 30% and saving \$360 annually in platform costs
- Directed a 10-person content and information team, coordinating website updates while maintaining consistent styling and mobile-responsive layouts
- Implemented semantic HTML, responsive navigation, and standardized metadata across 4 key pages using Figma prototypes to guide development and improve accessibility and SEO consistency

Associate Clerk

January 2024 – February 2025

Acme Markets

Philadelphia, PA

- Prepared 10+ online grocery orders per hour by optimizing picking and packing strategies, reducing order-preparation time
- Resolved customer issues through a support hotline by processing refunds, cancellations, substitutions, and order corrections to prevent fulfillment delays and improve order accuracy

Projects

Postal | Python, Docker, Rich, Pydantic | [Source Code](#)

June 2026 – Present

- Engineered a Python CLI coding agent using object-oriented architecture, streamed model responses, syntax-highlighted output, and an interactive prompt loop; published the harness to PyPI, reaching 5,000+ package downloads
- Designed a tool-calling system for file I/O, shell operations, and web search that delegates tasks across 5+ sub-agents and retains persistent memory, reducing manual intervention during long sessions
- Released Postal as an open-source project with a modular architecture built for easy customization and feature extension

Food Truck Finder | Python, Flask, SQLAlchemy | [Source Code](#) | [Live Site](#)

Jan 2026 – June 2026

- Built and deployed a food-truck discovery and review app as a full-stack developer on a 5-person team, developing backend routes, relational models and frontend UI/UX across 5 Agile sprints with defined user stories
- Designed RESTful API endpoints and SQLAlchemy models for a 1–5 star review and favorites system, with server-side input validation and automated rating aggregation
- Tracked 17 Drexel-area food trucks with centralized schedule, location, reviews, and favorites data

Pokedex | Go, RESTful APIs | [Source Code](#)

Sept 2026 – Present

- Built a Go CLI integrating PokeAPI across 9 commands, enabling users to explore locations, capture Pokemon, and inspect their collection
- Implemented a mutex-protected cache with automatic expiration using goroutines, reducing redundant API requests for repeated queries
- Managed persistent CLI state and paginated API navigation for captured Pokemon and location exploration
