Education

Drexel University **Expected Graduation: June 2030**

Bachelor of Science in Software Engineering, Minor in AI & Machine Learning *Philadelphia, PA*

- **Relevant Coursework:** Software Engineering & Development, Advanced Programming Tools & Techniques, Requirements Engineering, Computer Programming I–II, Computing and Informatics Design I-III, Calculus I-II

Technical Skills

Languages: Python, Go, C, Java, JavaScript, SQL, HTML, CSS, Bash

Developer Tools: Git, GitHub Actions, Linux, Docker, CI/CD, Figma

Libraries/Frameworks: Flask, FastAPI, SQLAlchemy, SQLite, PostgreSQL, pytest, OpenAI API, Pydantic, Jinja

Experience

Lead Frontend Engineer **August 2026 – Present**

A Better Way PAC *Philadelphia, PA*

- Leading migration of 4 pages from Squarespace to a **HTML, CSS, and JavaScript** frontend and a FastAPI backend with a SendGrid integration, reducing load time by 30% and saving $360 annually on platform costs
- Directing a 10-person content and information team, coordinating website updates and maintaining consistent styling and responsive layouts using **CSS media queries**
- Implemented semantic HTML, responsive navigation, and standardized metadata across 4 key pages using **Figma prototypes** to guide development and improve accessibility and SEO consistency

Associate Clerk **January 2024 – February 2025**

Acme Markets *Philadelphia, PA*

- Prepared 10+ online grocery orders per hour by optimizing picking and packing strategies, reducing order-preparation time
- Resolved customer issues through a support hotline by processing refunds, cancellations, substitutions, and order corrections to prevent fulfillment delays and improve order accuracy

Projects

Postal | *Python, Docker, Rich, Pydantic* | Source Code **June 2026 – October 2026**

- Engineered a Python CLI coding agent using object-oriented architecture, streamed model responses, syntax-highlighted output, and an interactive prompt loop; published the harness to PyPI, reaching **5,000+ package downloads**
- Designed a tool-calling system for file I/O, shell operations, and web search that delegates tasks across 5+ sub-agents and retains persistent memory, reducing manual intervention during long sessions
- Open-sourced Postal with a modular architecture designed for extensibility, maintainability, and easy customization

Pokedex | *Go, RESTful APIs* | Source Code **September 2026 – October 2026**

- Built a Go CLI integrating PokeAPI across 9 commands, enabling users to explore locations, capture Pokemon, and inspect captured Pokemon
- Implemented a **mutex-protected cache** with automatic expiration using goroutines, reducing redundant API requests for repeated queries
- Managed persistent CLI state and paginated API navigation for captured Pokemon and location exploration

Food Truck Finder | *Python, Flask, SQLAlchemy* | Source Code | Live Site **January 2026 – June 2026**

- Built and deployed a food-truck discovery app on a 5-person team as a **full-stack developer**, developing backend routes, relational models, and frontend UI/UX while applying **Agile/Scrum methodologies** across 5 sprints
- Developed RESTful API endpoints and SQLAlchemy models for a 1–5 star review and favorites system, with server-side input validation and automated rating aggregation
- Tracked 17 Drexel-area food trucks with centralized schedule, location, reviews, and favorites data
